Ms. Gretchen Schmidt, Community Relations  
United States Environmental Protection Agency  
1200 Sixth Avenue  
Seattle, Washington

Dear Gretchen,

As I Indicated to you over a month ago, I generated a quick summary of projected "community "concerns " which could be addressed in a newsletter Four basic areas unfolded:  
contamination, water pumping process, draw-down and domestic sampling.

#### Contamination

- Plume, rate and direction?
- Total amount of contamination in the landfill
- Rate of diminution
- Concept of perpetuity
- Alternative solutions on the horizon?

#### Pumping process

- Rate of water flow, Constant? 365/yr?
- Why not re-inject or use in more efficient manner
- Effect on Lil Spo river-Flow and bio.
- Right of way process-environmental wasteland
- Noise from strippers?
- Visual effect-ugly towers?
- Condensate in winter-roads, trees, wires?
- Hal H-C in air? Bleaching, crops, health?

#### Draw down

- Are all wells currently identified as to level and flow?
- How will evaluation be made? Level? Flow? Complaints?
- What's the remediation Process?
  - How?
  - When?
  - Residential vrs agricultural
  - At what point would pumping be halted? Criteria?

#### Domestic well sampling and misc.

- Where's the sampling plan??
- Define carefully the oversight roles of EPA and DOE.

USEPA SF

1414221

Conflicts? Spell out the differential roles of County ,  
State and Fed. jurisdictions

What are the time lines for repeated information  
presentations? Institutional memory is terrible and  
community memory is probably worse

I Imagine we could quickly expand this list, but there should be  
enough to deal with for now.

Sincerely,

(b) (6)

(b) (6), Chair, CLCAC
